Rakurri Brush Set V1.0

Thank you for downloading my bundle!

I am grateful to the community and the developers that makes Krita such a fantastic program! I want to give something back! These are the brushes I use, and I hope that people will find them useful! 😁

Everything you draw with my brushes will of course be yours! No need to credit me! It is not the brushes that makes the artwork, it's the person using them! 😊

On my Instagram you can see more artwork I have done in Krita!
https://www.instagram.com/rakurri/

On twitter I sometimes post about my brushes among other things!
https://twitter.com/Rakurri

Installation

1. Go to "Settings"
2. Press "Manage Resources"
3. Press "Import Bundles"
4. Select the .bundle file and open it!
5. Move the "Rakurri_Brushset_V1.0" from "Inactive Bundles" to Active Bundles! (And make sure Krita's "Krita_4_Default_Resources" is also in the left pane!)
6. Press "OK"!

Tilt support

Most of my brushes are based on tilt support, because that is a feature I really enjoy using!
The negative side of this, is that they won't work well on some tablets and screen devices that does not support it!

But there is a way to make them work! Here is a quick tutorial on how to convert the brushes to work decent without having tilt support:

First go to the "Edit brush settings" icon in the top bar or press F5, then enter the "Rotation" settings

Turn on "Drawing angle", and then turn off "Tilt direction"!

If you wish, you can click "Overwrite Brush" to make these changes permanent 😁

Some examples of brushes!

I made a little video showcasing a few of the brushes, you can watch it here:

The future of the pack

I want to wait for Krita 4.3 before significantly updating the brush pack again, because of the resource manager rewrite! I already have a lot planned for the Rakurri Brush Set V2.0! And I am excited to work on it!

Rakurri Brush Set V2.0 is not coming for a looong time though, expect that it is many, many months away!

Some things I am thinking for future releases:

- Maybe splitting the bundle into smaller bundles, to make it more modular! A blending bundle, an essentials bundle, a pixel art bundle and so on!
- Maybe have a different naming scheme that is more like Krita's naming scheme
- My brushes have a large focus on stylized drawings, but in the future, I want to make more painterly brushes, with more textures and more brushes with a traditional feel! (If you want amazing brushes like that, I can highly recommend Ramon Miranda's Digital Atelier https://gumroad.com/krita#ehZUc, and best of all with that pack; the money goes to Krita development!)
- Maybe update the icons. I do like the current ones and that they are colored to show what kind they are, but I am thinking of making it more clear what special properties each one has, like having an icon showing what brushes has tilt or other properties!
